

COMPAK ARM

Technical catalogue: Nozzle
 Section: 01
 Revised: 20.01.2017

The Geovent Compact Arm is the perfect extraction solution, when the room height is low in the desired work place, e.g. in welding boxes. The compact Arm gives with its telescopic function the perfect balance between the larger arm's suck capacity and the smaller arm's smoother operation. When the work is done, - you push the arm up and away, and therefore it requires the minimum of space. The arm is mainly used for the welding of smaller subjects, where the time and space are scarce.

The arm is supplied ready for mounting the ceiling (enabling a full 350° operation) or to the wall, with separate fan or for use with a central system.

The arm can be extended up to 7m by means of extension arms.

Description

Ceiling bracket - 360° turn able: Steel console in powder enamel with brass bearing and VA rubber packing ring.

Hood: Light weight hood in $\phi 160$ or $\phi 200$ mm. The hood is equipped with an integrated ergonomic handle. Covered in powder enamel yellow RAL1007.

Arm: Aluminum profiles with tension springs and sliding bearing.

Hose: Black P2A1000 in strong PVC/ polyester web with steel spiral. Temperature from -40°C to $+100^{\circ}\text{C}$.
